

Submission to the Victorian Law Reform Commission

MEDICINAL CANNABIS REFERENCE

Number	96
Name	KF
Date	10 July 2015

Hello Dr Freckelton,

Fred Fotis said you may be interested in my MS story. I was diagnosed 4 years ago after many years in limbo. My main symptoms were pins and needles, electric shocks, nerve pain in my feet and legs that made it very painful to walk, severe throat spasms, loss of sensation in the right side of my face, cognitive issues, extreme fatigue. I also suffered from alopecia areata for 10 years. I started taking cannabis oil made too the Rick Simpson protocol 3 years ago. I no longer lose my hair, I no longer get the pins and needles or the electric shocks, I have recovered some of the feeling in my face but not all. If I take a small amount of cannabis oil every other day, I am able to do activities that include walking, without extreme pain. My MS has also not progressed. If you would like anymore information I'd be happy to help.

Regards
KF
