Hi

Here are my final Notes for my submission,

I wrote the bulk of my submission submitted online previously but these are some things I wanted to add. I am the woman with disabilities who wrote about my experiences being stalked by an organised crime gang and other perpetrators being homeless

Put Trackers in stalkers shouldn't wait til there's an IVO, police should do immediately Alerts victims
Develop better technology to protect victims better
Many stalkers using apps to communicate underground .
Stalking communication apps underground
Sending more and more men after you needs to be assessed to prove these men are linked, cos retribution from going police ...
AFP and FBI or someone in police in the past set up an underground phone communication app that criminals were using, to then catch their crimes
Invest in more undercover police operations for stalking victims to catch the stalkers in their tracks

there should be a way victims can look up any name on a public database anonymously without the victims name being identified, just to see if their perpetrator is locked up and for what crimes, some victims prefer to let sleeping dogs lie then fight things in a justice system that inevitably fails them (whilst also making the violence worse cos of retribution from going to the police in the first place), so for victims who choose to do that, it important that they can see if their perpetrators locked up for other crimes against other victims, for how long they're locked up for / when they will get out, so that the victim can be aware. and any other perpetrators names listed that were involved in their crimes (e.g. if they were colluding on crime together like in a organised crime gang).

The impacts of the stalking and abuse and their advanced psychological abuse and torture strategies and techniques have been

Not feeling safe at any time anywhere
Not being able to be alone cos of the constant threat of murder and attempted abduction cos I knew I would fight to the death in self defence than be sex trafficked by that gang which was why I fled Melbourne and stayed with a friends friend in his sharehouse cos I had no where safe to go but ended up entering a relationship that soon became abusive and I was being repeatedly raped as a sex slave but still to this day the housing services haven't housed me so I havent been able to escape this abusive relationship fully yet . My boyfriend is a member of the army oversea has fought in wars so he was and is still able to protect me from the gang. I got tired of fighting the gang alone and was too scared to sleep anywhere alone or be alone for a really long time after I went through the trauma with the gang and them sending about 40 men after me
Not being able to digest my food, living with permanent digestive disability
Being tortured from my sleep deprivation

Being tortured from not being able to see my family nephew and cousins and friends for many years cos I was terrified of the gang finding out where they live by them stalking me there

Living everyday with feeling I'm going to get murdered

Having to flee with almost nothing I felt like a refugee in my own country

I still live with fear that the gang will find me eventually again, and that everything I have fought so hard for to rebuild my life will be all lost again if the gang come into my life again

I was in shock for many many years that these men invested so much time money energy and resources into trying to successfully abduct me

I ended up becoming a sex slave and forced into sexual slavery and catching hep C then believing I would die from cancer cos of the hep C and that i was already living with 3 auto immune conditions my immune system was too fucked pto heal the hep C

I had to flee my university and my work for many years

I lost friends and got hurt by other friends over my experiences and the gang violence

Victims of crime service worker didn't believe me and I had video recorded evidence of their abuse and violence

Needing to live in hiding for rest of my life has a enormous impact on me socially and not being able to access disability support in my home cos there's no workers trained in violence safety who would be willing to tell no one including NDIS my location

The identity theft means my accounts and workers emails and my case files keep getting hacked I received an email from my safe steps worker from her email from the stalker trying to trick me into steal my email and password by using a Google form to enter my email and password that looked legitimate and asking me to log-in to download some private documents that were supposedly sent to me and me being too tired I almost did fall for it but then my tiredness and exhiastion saved me cos I was like I'll deal with it in the morning and then I got the response back saying the security of my workers account had been compromised and not to not open any further emails from her .

The abuse is so ongoing that if I reported all the crimes against me it would take over my entire life and my whole life would be dealing with the police and the stalkers bullshit

I see other women get murdered every week from stalking and it's really harrowingly gut wrenching

Because I'm like that so easily could have been me who got murdered and it's even harder cos I don't know how many other women have been victims of this organised crime gang I live in chronic pain every day to the point where I cannot sleep properly and cannot access the treatments I need cos I cannot afford private health care and during covid lockdowns all student clinics for allied health are closed

I had barriers to successfully fully changing my identity including that they won't change my registration numbers on my identity documents, only my addresses and or names but if you're under the same ID numbers that's a disaster for being stalked

I cannot even have a bubble buddy or go anywhere at all I'm living like a prisoner in covid lockdowns cos I don't want police harassing me about being homeless or trying to find out locational information about my locations or temporary accomdodations cos I'm worried the gang may have connections with the police

I would like to see more reforms that focus on identity and privacy protections

Including VHR Medicare TAC my aged care and more places to have a restricted access system like Centrelink and NDIS have in place for extra security and privacy and encryption Protection

I would like to get help fixing my devices to have more security protections on them

The help ID care give is so confusing and overwhelming and overload of information that I cannot implement none of it cos I don't understand how cos of my diabikities and fatigue

I made AFP police reports to human trafficking team and asked the police local and AFP to do An undercover police investigation while they watch me get abducted and I wear tracking device to get these men convicted and the police refused to be involved

I still feel guttered and soul destroyed by that these men were not punished for their crimes vioence and abuse and stalking and still walk free every day enabling and empowering them to do this to other victims too

Because they are delivering from gumtree he has a van the lead ring member of this gang that's how they find out where victims live and he also asked a lot of questions When I first met him about wher I'm from where my family are from what I do for work study and where etc . I never told him any location just the library near my friends place and I never would have even told him that if I knew he would never leave me alone and start sending all these other men after me

I tried to disguise my identity but had no support from police or organisations to do this I considered these things

Becoming Muslim hijab nihab burka etc that could hide my walking aids for my disabilities too

Riding a motorbike getting my lisencc and having helmet and big coat to cover my identity

I bought a hair band to go around my head and a zip to sew into it , then bought a GPS tracking device off eBay to sew into it. Cos then I knew I could still have that in my hair if I was fighting in self defence I wouldn't drop or lose it, if everything was taken away from me my bags clothes being gang raped by them god forbid I would be less likely to lose it if it was in my hair

I did martial arts and self defence training for many years because of my experiences of being stalked by work colleagues one was theatrning to kill himself if I didn't be in a relationship with him, others were sexually assaulting me or trying to,

The self defence trainings made me feel less unsafe in my body with my level of diabikities but I still feel unsafe in my body all the time

I was ready to flee overseas as a refugee for about two years I wanted to do this more than anything to find somewhere overseas I could get surgery and be cut open to have a GPS tracker put inside me so that my family and police could find me if I was abducted or went missing persons, then I could have my freedom of movement back , and so the police could find where they are sex trafficking these women and girls to.

Thank you
